# Peel & Stick

## Installation Instructions

To ensure your photo wall mural looks its absolute best and lasts as long as possible, you should ensure the wall is properly prepared in advance.

## How to Prepare Your Wall

Ideally your photo wall mural would be installed on clean, dry, smooth plaster that has been finished with a good quality primer. Do not use lining paper underneath your mural.

Murals can be installed on matt emulsion paint only if necessary. Use white or off-white so there are no bright or bold colours behind your mural.

We strongly recommend leaving paint for 2-3 weeks to dry if freshly painted to allow any gasses to dissipate.

## What You'll Need

**A Helper**

**Pencil**

**Spirit Level**

**Tape Measure**

**Soft Brush**

**Sharp Knife**

**Clean Cloth**

# Step by Step

---

## Step 1

Your photo wall mural will be supplied cut to size in pieces and it's best to lay them out flat and leave them to rest for a few hours to prevent curling.

## Step 2

Measure out from a wall corner 5cm less than the width of your supplied pieces and use a plumb line or spirit level to draw a vertical line from ceiling to floor. This gives you a straight edge from which to line up your first piece of wall mural.

## Step 3

Apply the first piece, taking care to match up with your guideline. Remove just the first few centimetres of the backing from the top to begin with. Apply to the top of the wall, smooth down with a soft brush or a cloth to remove any bubbles or wrinkles, removing the rest of the backing as you work down.

## Step 4

Repeat this process for each piece. All pieces are supplied edge to edge and are not designed to overlap.

## Step 5

When all panels have been hung, trim any excess paper at the edges, top and bottom and around fixtures, fittings and slopes with a sharp knife.

## Note

The edges of your mural have an additional 5cm excess trim. This may need trimming once you've installed your mural.
